

Release Notes

Product Name: TeamTexter® 2.0 Web Application

Release Number: v2.0 SP2.1

Date of Release: April 27, 2022

Overview: This service pack includes an emergency fix for email parsed message content that wasn't being queued properly.

1. Bug – Email parsed message content relay chain

- **Issue Summary:** When sending an inbound email to TeamTexter, and messaging a new person, TeamTexter would send the opt in welcome message, but then never go back and send the email parsed content.
- **Resolution:** An inbound email parsed message content queue was created to pause any email parsed message content until after the new person opts into texting, then the queue releases any messages for that person.
- **Impacts:** None.
